| VLM 371 G20    | 20 mL, RTU    | Ready-to-use | Protocol Recommendations (VALENT® Automated Slide Staining Platform) Cont’d: Pretreatment: Perform heat retrieval at 98°C for 60 minutes using Val AR-Lo pH, 5X (use at 1X). Peroxidase Block: Block for 5 minutes with Val Peroxidase Block. Primary Antibody: Incubate for 20 minutes. Secondary: Incubate for 10 minutes with Val Mouse Secondary. Linker: Incubate for 10 minutes with Val Universal Linker. Polymer: Incubate for 10 minutes with Val Universal Polymer. Chromogen: Incubate for 5 minutes with Val DAB. Counterstain: Counterstain for 5 minutes with Val Hematoxylin. Protocol Recommendations (intelliPATH FLX® and manual use): Peroxide Block: Block for 5 minutes with Peroxidized 1. Pretreatment: Perform heat retrieval using BORG or Reveal Decloaker. Refer to the BORG or Reveal Decloaker product data sheet for specific instructions. Primary Antibody (Optional): Incubate for 5-10 minutes at RT with Background Punisher. Primary Antibody: Incubate for 45 minutes at RT. Probe: Incubate for 10 minutes at RT with a secondary probe. Primary Antibody: Incubate for 20 minutes at RT with a tertiary polymer. Chromogen: Incubate for 5 minutes at RT with Biocare’s DAB-OR. Counterstain: Counterstain with hematoxylin. Rinse with deionized water. Apply Tacha’s Bluing Solution for 1 minute. Rinse with deionized water. intelliPATH FLX Automated Slide Stainer: IP371 is intended for use with the intelliPATH FLX. Refer to the User Manual for specific instructions for use. When using the intelliPATH FLX, primary antibody block with intelliPATH FLX Peroxidase Blocking Reagent (P85000) may be performed following heat retrieval. Technical Note: This antibody, for intelliPATH FLX and manual use, has been standardized with MACH 4 detection system. Use TBS for washing steps. Protocol Recommendations (ONCORE™ Automated Slide Staining System): OA1371 is intended for use with the ONCORE. Refer to the User Manual for specific instructions for use. Protocol parameters in the Protocol Editor should be programmed as follows: Protocol Name: Synaptophysin Protocol Template (Description): Ms HRP Template 1 Dewaxing (DS Option): DS2 Antigen Retrieval (AR Option): AR1, high pH; 101°C Reagent Name, Time, Temp.: Synaptophysin, 30 min., 25°C Limitations: The optimum antibody dilution and protocols for a specific application can vary. These include, but are not limited to fixation, heat-retrieval method, incubation times, tissue section thickness and detection kit used. Due to the superior sensitivity of these unique reagents, the recommended incubation times and titers listed are not applicable to

**Intended Use:**
For In Vitro Diagnostic Use
Synaptophysin [27G12] is a mouse monoclonal antibody that is intended for laboratory use in the qualitative identification of synaptophysin protein by immunohistochemistry (IHC) in formalin-fixed paraffin-embedded (FFPE) human tissues. The clinical interpretation of any staining or its absence should be complemented by morphological studies using proper controls and should be evaluated within the context of the patient’s clinical history and other diagnostic tests by a qualified pathologist.

**Summary and Explanation:**
This monoclonal antibody [clone 27G12] is a reliable marker for neuroendocrine and neuronal neoplasms, as well as their normal counterparts (1-2). Studies have shown synaptophysin has a higher degree of specificity than NSE, but is often used in conjunction with CD56, NSE and chromogranin. This clone aids in providing sharper staining when compared to other rabbit synaptophysin antibodies.

**Principle of Procedure:**
Antigen detection in tissues and cells is a multi-step immunohistochemical process. The initial step binds the primary antibody to its specific epitope. After labeling the antigen with a primary antibody, a one-, two- or three-step detection procedure can be employed. The one-step procedure will feature an enzyme-labeled polymer that binds to the primary antibody. A two-step procedure will feature a secondary antibody added to bind to the primary antibody. An enzyme-labeled polymer is then added to bind to the secondary antibody. The three-step detection procedure will feature a secondary antibody added to bind to the primary antibody followed by a linker antibody step for maximum binding. An enzyme-labeled polymer is then added to bind to the linker antibody. These detections of the bound antibodies are evidenced by a colorimetric reaction.

**Source:** Mouse monoclonal

**Species Reactivity:** Human; others not tested

**Clone:** 27G12

**Isotype:** IgG1

**Protein Concentration:** Call for lot specific Ig concentration.

**Epitope/Antigen:** Synaptophysin

**Cellular Localization:** Cytoplasmic

**Positive Tissue Control:** Pancreas, neuroendocrine tumor

**Known Applications:** Immunohistochemistry (formalin-fixed paraffin-embedded tissues)

**Supplied As:** Buffer with protein carrier and preservative

**Storage and Stability:** Store at 2°C to 8°C. The product is stable to the expiration date printed on the label, when stored under these conditions. Do not use after expiration date. Diluted reagents should be used promptly; any remaining reagent should be stored at 2°C to 8°C.

**Protocol Recommendations (VALEN® Automated Slide Staining Platform):**
VLM371 is intended for use with the VALEN. Refer to the User Manual for specific instructions for use. Protocol parameters in the Protocol Manager should be programmed as follows:

- **Deparaffinization:** Deparaffinize for 8 minutes with Val DePar.
- **Deparaffinization:** Deparaffinize for 8 minutes with Val DePar.
- **Deparaffinization:** Deparaffinize for 8 minutes with Val DePar.
- **Deparaffinization:** Deparaffinize for 8 minutes with Val DePar.

**Protocol Recommendations (intelliPATH FLX® and manual use):**

- **Peroxide Block:** Block for 5 minutes with Peroxidized 1.
- **Pretreatment:** Perform heat retrieval using BORG or Reveal Decloaker. Refer to the BORG or Reveal Decloaker product data sheet for specific instructions.
- **Primary Antibody (Optional):** Incubate for 5-10 minutes at RT with Background Punisher.
- **Primary Antibody:** Incubate for 45 minutes at RT.
- **Probe:** Incubate for 10 minutes at RT with a secondary probe.
- **Primary Antibody:** Incubate for 20 minutes at RT with a tertiary polymer.
- **Chromogen:** Incubate for 5 minutes at RT with Biocare’s DAB-OR. Incubate for 5-7 minutes at RT with Warp Red.
- **Counterstain:** Counterstain with hematoxylin. Rinse with deionized water. Apply Tacha’s Bluing Solution for 1 minute. Rinse with deionized water.

**intelliPATH FLX Automated Slide Stainer:**
IP371 is intended for use with the intelliPATH FLX. Refer to the User Manual for specific instructions for use. When using the intelliPATH FLX, peroxidase block with intelliPATH FLX Peroxidase Blocking Reagent (P85000) may be performed following heat retrieval.

**Technical Note:**
This antibody, for intelliPATH FLX and manual use, has been standardized with MACH 4 detection system. Use TBS for washing steps.

**Protocol Recommendations (ONCORE™ Automated Slide Staining System):**
OA1371 is intended for use with the ONCORE. Refer to the User Manual for specific instructions for use. Protocol parameters in the Protocol Editor should be programmed as follows:

- **Protocol Name:** Synaptophysin
- **Protocol Template (Description):** Ms HRP Template 1
- **Dewaxing (DS Option):** DS2
- **Antigen Retrieval (AR Option):** AR1, high pH; 101°C
- **Reagent Name, Time, Temp.:** Synaptophysin, 30 min., 25°C

**Limitations:**
The optimum antibody dilution and protocols for a specific application can vary. These include, but are not limited to fixation, heat-retrieval method, incubation times, tissue section thickness and detection kit used. Due to the superior sensitivity of these unique reagents, the recommended incubation times and titers listed are not applicable to
Synaptophysin
Concentrated and Prediluted Monoclonal Antibody
901-371-022219

Limitations Cont’d:
other detection systems, as results may vary. The data sheet recommendations and protocols are based on exclusive use of Biocare products. Ultimately, it is the responsibility of the investigator to determine optimal conditions.

Quality Control:

Precautions:
1. This antibody contains less than 0.1% sodium azide. Concentrations less than 0.1% are not reportable hazardous materials according to U.S. 29 CFR 1910.1200, OSHA Hazard communication and EC Directive 91/155/EC. Sodium azide (NaN₃) used as a preservative is toxic if ingested. Sodium azide may react with lead and copper plumbing to form highly explosive metal azides. Upon disposal, flush with large volumes of water to prevent azide build-up in plumbing. (Center for Disease Control, 1976, National Institute of Occupational Safety and Health, 1976) (3)
2. Specimens, before and after fixation, and all materials exposed to them should be handled as if capable of transmitting infection and disposed of with proper precautions. Never pipette reagents by mouth and avoid contacting the skin and mucous membranes with reagents and specimens. If reagents or specimens come in contact with sensitive areas, wash with copious amounts of water. (4)
3. Microbial contamination of reagents may result in an increase in nonspecific staining.
4. Incubation times or temperatures other than those specified may give erroneous results. The user must validate any such change.
5. Do not use reagent after the expiration date printed on the vial.
6. The SDS is available upon request and is located at http://biocare.net.

Troubleshooting:
Follow the antibody specific protocol recommendations according to data sheet provided. If atypical results occur, contact Biocare’s Technical Support at 1-800-542-2002.
