

Antigen Retrieval Chamber High Voltage

Programmable Pressure System for HIER - 230 VAC

HANDLES THE PRESSURE.

Antigen Retrieval Chamber High Voltage

The Antigen Retrieval Chamber High Voltage (ARCHV) is for professional laboratory use in conducting heat-induced epitope retrieval (HIER) of formalin-fixed paraffin embedded (FFPE) tissue mounted on microscope slides prior to performing IHC or ISH staining tests.

Antigen Retrieval Chamber High Voltage (ARCHV) was developed with the flexibility to choose from 6 pre-programmed protocols or custom protocols with a user-friendly touch screen for ease of use. Antigen Retrieval Chamber High Voltage (ARCHV) offers a temperature range between 60°C and 121°C with user programmable time and temperature settings. Adjust the temperature in 1°C intervals and customize the time in seconds, minutes, or hours. For added convenience, Antigen Retrieval Chamber High Voltage (ARCHV) is available in multiple languages.

Antigen Retrieval Chamber High Voltage (ARCHV) has the capability to process larger tissues by utilizing double wide slide carriers. The double wide slide carriers hold up to 27 double wide slides. Both standard slide and double wide slide carriers were designed for superior durability to withstand higher temperatures and improve durability over other slide carriers.

Antigen Retrieval Chamber High Voltage (ARCHV) is registered as IVDR.
